Experience. Technology. Solutions.

Intagras – Case Studies

About Florida Crystals

Florida Crystals began as a modest farming operation in 1960 in Palm Beach County, Florida and has evolved as a fully integrated sugarcane company. Today, the company's 2,000 employees take Florida Crystals® natural products from planting and harvesting through milling, packaging and distribution to markets across the country.

The Challenge

Florida Crystals bought a portion of Tate & Lyles assets and required assistance in porting over custom applications from Tate & Lyle's SAP system to Florida Crystals SAP system. The challenge was to try and maximize the benefits from their purchase of an existing system in an economical (both time and capital expenditure) manner.

The Intagras Solution

Intagras worked with Tate & Lyle employees to understand and analyze the custom applications that were bought and being migrated over. A thorough analysis of the applications and code was performed and the code was updated to work in the new SAP environment. Additional coding, testing and analysis were done to add functionality to the applications.

Technologies Used: ASP 3.0, VB 6.0, ASP.NET, VB.NET, SQL SERVER 2005, SAP, SAP XI

The Results

Intagras re-wrote the integration points between the custom applications and SAP using SAP's XI server. The use of key management personnel to completely understand the business needs, as well as development challenges forged a solution that both met and exceeded expectations. Intagras leveraged their experiences and devised a plan and approach to migrate, develop, and test applications in Florida Crystals SAP install.

Client Testimonial

Intagras was brought in as consultants to assist with the project. They came in and understood the challenges and devised a solution that worked perfectly within all our stringent requirements. Intagras worked in conjunction with another firm who had expertise with our existing legacy systems but was unfamiliar with the Tate & Lyle system. Intagras definitely exceeded our expectations.
