Experience. Technology. Solutions.

Intagras – Case Studies

About MediRegs

MediRegs provides integrated health care compliance content and software solutions for professionals in healthcare, higher education and life sciences, including professionals in accounting, law and consulting. The company's ComplyTrack Suite offers streamlined Web-based solutions for auditing, investigating, managing, assessing and mitigating compliance and enterprise risk. In addition, the company's online portals for regulation and reimbursement, higher education, pharmaceuticals, food, and medical devices provide the most comprehensive and consolidated solution available for managing compliance content and research.

The Challenge

Management was faced with a difficult problem with their ComplyTrack Suite – it was a long established desktop application that was installed on several hundred desktops, was becoming outdated and required extensive maintenance and improvements. Additionally, the current subscriber base was frustrated with the functionality and lack of adequate response time because of the difficulty in rolling out updates to the desktops. The application needed to be overhauled, updated and delivered in a more user-friendly, accessible fashion.

The Intagras Solution

Consultants worked with MediRegs SMEs and their knowledge of the existing ComplyTrack software to re-write the existing desktop application as a web-based SaaS solution. Intagras managed the full life cycle of the application

development process, developed all code and acted as the company's CIO regarding hosting and managing the web-based version of ComplyTrack.

Technologies Used: ASP.NET, Infragistics Web Controls, SQL SERVER 2005, Crystal Reports, Excel

The Results

The launch of ComplyTrack 5.0 represented a new day for existing and potential new customers. The new web-based SaaS service offering not only eased the pain of customers but simplified the support process by implementing the application in a hosted environment. After the upgrade, all customers receive software updates in real-time and MediRegs controls 100% of the infrastructure instead of relying on 150 separate IT staffs for implementation and support.

Client Testimonial

Our Company has been a client of Intagras for more than 3 years. They have provided us with excellent system design, analysis, and programming services throughout the course of a major redesign, of a legacy system based on FoxPro, to a state-of-the-art .NET ASP implementation. Our new product is daily use in several hundred installations throughout the country. It is an efficient, reliable, responsive, and robust system. We are pleased with the quality of Intagras work and do not hesitate to recommend them.
